

My Research Philosophy

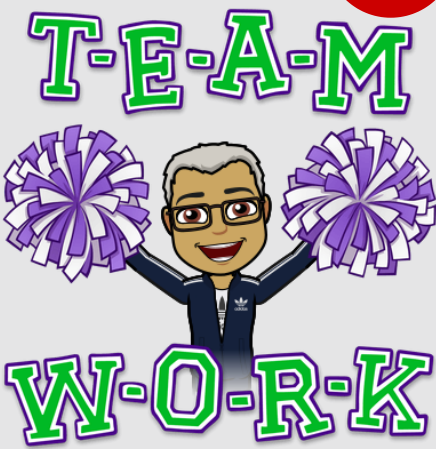

Get to know Carlos C. Goller as a researcher

1

WE WILL BE A TEAM!

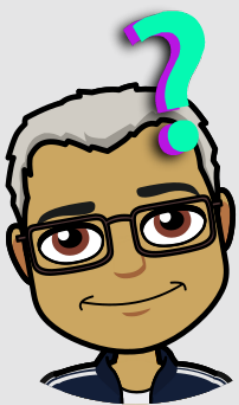

Science is collaborative. We all bring expertise and different ideas. Our diverse backgrounds and experience enrich the brainstorming sessions we can have as we let our curiosity drive our search for new knowledge and connections.

2

WE WILL BE CURIOUS!

Discoveries are fueled by curiosity. I want you to share your curiosity so that we can learn together about something I had not considered before! Your curiosity will help motivate you to do research independently, learn more, reach out to get help when needed, and share your findings with others!

3

WE WILL TRY AGAIN!

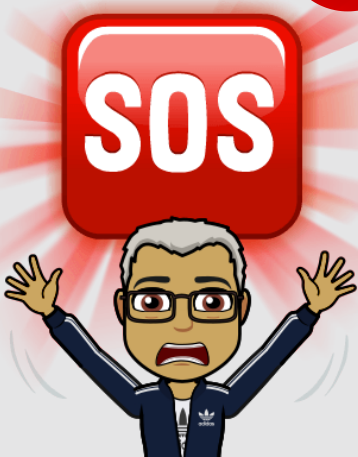

Things often don't work the first time. We will try again. You will try a couple of times before being satisfied. I will help you and provide resources, and you will use your grit to move forward and learn from every time you experience an unexpected setback or cannot explain your results.

4

WE WILL SEEK HELP!

As an educator, I want you to learn and help you evaluate your development and growth. However, I will not know all the answers. Therefore, I will encourage you to seek help together. We will make connections, learn from diverse researchers, and realize that part of the research experience is navigating collaborations.

5

WE WILL BE FLEXIBLE!

I truly love designing learning experiences based on evidence and new questions. I will encourage you to propose a question and go after the resources or perform the experiments to discover the knowledge or make the connections you seek. Sometimes, we will have to change course to reflect new opportunities or challenges. I want you to know that I am ready to assist you on our journey.
